

## ENHANCED INFECTION PREVENTION

# SINGLE-USE ENDOSCOPE VALVES

Reusable medical devices, like endoscope valves, can pose a risk of infection if not adequately reprocessed between patient uses. The manual cleaning and reprocessing required to ensure complete sterilization can be labor-intensive and time-consuming.

Our disposable valves offer an efficient alternative to reusable valves, eliminating the need for extensive cleaning and reprocessing. Using our disposable valves can help improve procedural efficiency and reduce the risk of cross-contamination, enhancing your infection prevention practices.
